

Affinity® ERP Systems Management Suite

Simplify Your Affinity Footprint

Whether you are running Affinity® in the cloud or on premise, stand-alone or fully integrated, for a single hospital or a multi-tenant healthcare system, the Affinity® ERP Systems Management Suite provides the tools you need to take the mundane IT work off your plate.

Our software and database management tools are so easy to use, even non-technical people can manage your entire Affinity® ERP solution with minimal effort. So, while you can operate your ERP from the cloud, Affinity® SMS lets you reduce costs and your reliance on third-party contractors by keeping Affinity® in-house.

Systems Management Suite: Key Components

Security Manager

Save time and money by simplifying and monitoring all Affinity ERP user security from this single location.

Data Manager

Effortlessly scale Affinity ERP server configuration and automatically create test environments without a database administrator.

IT Manager

Configure system alerts, monitor and download upgrades to keep your system current and worry free.

Server Update Wizard

Automatically update all system tables and synchronize user workstations as new updates are installed.

Schema Location Editor

Gain technical economies of scale by running multiple distinct organizations from a single server.

Technical Tools

From interface management to version control and event notification, SMS tools keep you in the know and ready to respond.

“I've been utilizing the Affinity ERP solution since 2007, and it has been easy to administer, stable and straightforward to update. Based on my many years of working with it, I would recommend the Affinity ERP product suite. Vendor support is critical in my position, and Harris and their Affinity ERP support team have been excellent and responsive when I have needed their services.”

— Robert Schuler, IT Applications Support

Benefits-at-a-Glance

- Software and database management tools designed to automate the ERP IT function
- Simplify the ERP footprint whether in the cloud or on premise
- Automate IT functions across all Affinity ERP solutions
- Ensure a low impact on internal IT resources
- Minimize reliance on third-party contractors and reduces related costs

2300 Corporate Park Drive, Suite 400 Herndon, VA 20171

Affinity ERP™ Systems Management Suite

The superior integration and power of Affinity ERP Systems Management dramatically reduces the amount of resources required to maintain all of your Affinity ERP software. It even makes it easy for non-IT people to take on much of the task, so you can minimize reliance on third-party contractors and reduce costs.

Affinity ERP Security Manager

Manage security for all your Affinity® applications from a single location to take full advantage of the fully integrated Affinity® ERP software solution.

- Assign each user an NT logon to take advantage of single sign-on functionality
- Share tables with HR/Payroll Employee Manager to simplify your user management
- Assign individual users to positions and groups to manage system rights using mass updates
- Set global login parameters for all users from a single location
- Easily and quickly create extensive activity reports with a click of the mouse

Affinity ERP Data Manager

Scale your Affinity® ERP solution by maintaining table definitions across multiple databases without the use of a database administrator.

- Easily set up multiple iterations of the software for testing or production use
- Maintain multiple versions from a single location
- Analyze tables for version compatibility

Affinity ERP IT Manager

Monitor and manage your Affinity® ERP software from a single location.

- Customize workflow rules to manage approval requests based on user-defined parameters
- Customize templates for workflow emails to make them specific to your organization

Integration, Efficiency are Key

With Affinity ERP Systems Management, you can manage technical aspects of all Affinity ERP applications from a single location. The built-in tools automate database administrator functions and dramatically minimizes the IT footprint required to maintain all of the Affinity ERP software in our

fully-integrated solution suite.

Superior Integration and Efficiency

The power of Affinity Systems Management dramatically reduces the amount of resources required to maintain all of your Affinity ERP software.

Affinity ERP Server Update Wizard

Install all your Affinity® ERP software updates from a single location with a single click.

- Easily maintain multiple versions of your software for live use or testing
- Automatically update all system tables and databases to match your current release
- Quickly install your new version by only updating tables impacted by the upgrade

Affinity ERP Schema Location Editor

Various sets of Affinity® ERP data, or schemas, can be managed with this module to define how you want each database accessed and managed.

- Manage multiple data sets from a single location
- Define your preferred SQL authentication type
- Set up a single database login for all Affinity ERP users
- Scale your installation from everything on one server to a server for each module

Affinity ERP Technical Tools

Harris Affinity continues to add web services to provide incremental benefits as user needs evolve.

- Manage all third party ERP interfaces from a single screen
- Track system messages from your ERP dashboard
